

Modiri Lindokuhle Molemoeng

062 505 7011

jhoanscottfellow@gmail.com

Tshwane/Pretoria

Skills

Languages: CSS, HTML, JavaScript, SQL, Java and C#

Frameworks: Node.js and Spring Boot,

Tools: Ubuntu, Git, WSL, Docker, and PostgreSQL

Other: REST API and Waterfall Methodology

Education

Grade 9 to 12 - Pierre van Ryneveld Christian Academy (PVRCA): 2019-2022

B Computing- Belgium Campus iTVersity: 2023 – to date

Hobbies and Activities

I like participating in sports activities, reading and travelling. I participated in volleyball and played at a tournament against other schools while in high school. I also played football. I enjoy running to keep fit and healthy.

I have travelled to various destinations in Southern Africa and overseas.

SUMMARY

I am Modiri Molemoeng; I am a fourth-year software engineering student at Belgium Campus iTVersity. I build web applications and functional systems using languages and frameworks. I'm very passionate on building and trying out new things and working on new technologies. I want to continue learning and expand my knowledge.

Projects and Experiences

HTML, CSS and JavaScript

- Built a website for my campus where users can interact, view courses and apply for enrolment.
- Built a fitness app where users can interact by logging their workouts, track their progress, record and view them in the form of a list or summary and generated graphs/charts visualizing workout statistics from canvas.
- Created a bug-tracker app that tracks reported software bugs in software development projects.

C#

- Created an Enum-menu food options choice on the console app
- Created windows form application and connect to the database and text file using the Windows App

SQL

Created a database for an organization including triggers, views, tables, indexes and stored procedures and constraints on Microsoft SQL Server Management Studio.

Node.js and Express.js

Built a community portal website using Node.js for backend, app.js, Express.js for server framework and EJS as the templating engine and GitHub for commits and changes.

Year Project

Drone-based 3D Mapping and Modelling that captures car accidents scenes and generates the images in a form of a pdf report and to be displayed on a user's portal. Front-end: HTML, CSS and JavaScript for the user's portal to view accident scenes details and login. MySQL that stores vehicle and accident data along with the user's data. Backend: Express.JS and node.js for static files, Flask for API routing and orchestration. Python for function the DJI Trello drone from its code and generating pdf reports of the accident scenes.

Software Engineering Project: Built a Learning Management System called Campus Learn for students to interact with tutors and ask questions. Front-end: JavaScript, HTML and CSS. Back-end: Java. PostgreSQL and docker for the database containers. Thyme leaf integrated with spring boot to dynamically render HTML content directly from backend controllers.
